

POLY TANK OUTLETS

Poly tank outlets are ideal for retrofitting to poly rainwater tanks, should an outlet or inlet be required in a non-standard position.

Poly tank outlets are commonly used in applications such as chemical tanks, where non-corrodible fittings are required.

Available in sizes from 20mm to 100mm BSP, these fittings are supplied with an extra length thread to facilitate the easy connection of other fittings.

They can also be fitted to other poly products such as troughs.
