

SEPTIC TANK OUTLET FILTER

Product Code: **USTFILTER**

A septic tank bristle filter is used to filter the liquid from the tank as it leaves the chamber. By preventing the escape of solids into the soakage trenches, the filter ensures that the risk of congestion and blockage of the trenches is very low.

The BLOO Bristle Filter's simple design provides a fast, clean and affordable solution for the filtering of septic tank outflow. The filter has been hydrodynamically designed with non-directional bristles to allow unrestricted flow of effluent and biological maturing to maximise the septic tank's efficiency.

The filter is simply pushed into the inspection opening on the outflow side of the tank. If, in time, the septic system appears to be choked or blocked up, simply remove the filter and replace it with a new one.

SPECIFICATIONS

Code	USTFILTER
Inlet / Outlet size	Filter outlet suits Bloo Septic Tank – 100mm
Diameter	100mm
